MODULES SAP TIED TO LOGISTICS

Within SAP, **logistics** is a major domain that covers the flow of materials, goods, and related information across the supply chain. Here are the main modules and solutions tied to logistics:

Core SAP Logistics Modules

- **SAP MM (Materials Management):** Procurement, inventory, and vendor management.
- **SAP SD (Sales & Distribution):** Customer orders, shipping, billing, and revenue.
- **SAP PP (Production Planning):** Manufacturing scheduling, capacity planning, and shop floor control.
- **SAP WM (Warehouse Management):** Storage, picking, packing, and warehouse operations.
- **SAP TM (Transportation Management):** Freight planning, carrier selection, and transport execution.
- **SAP EWM (Extended Warehouse Management):** Advanced warehouse processes like cross-docking, wave picking, and automation.
- **SAP LE (Logistics Execution):** Integrates shipping, transportation, and warehouse activities.

Logistics in SAP S/4HANA

In the newer **SAP S/4HANA** suite, logistics is streamlined into integrated lines of business:

- **Sourcing & Procurement** (successor to MM).
- **Manufacturing** (successor to PP).
- **Supply Chain** (covering EWM, TM, and planning).
- **Asset Management** (maintenance and logistics of equipment).

How They Work Together

Module	Focus	Typical Users
MM	Procurement & inventory	Purchasing, warehouse staff
SD	Sales & distribution	Sales, customer service
PP	Production planning	Manufacturing planners
WM/EWM	Warehouse operations	Logistics, warehouse teams
TM	Transportation	Logistics, shipping coordinators

Module	Focus	Typical Users
--------	-------	---------------

LE	Logistics execution	Supply chain managers
----	---------------------	-----------------------

✓ In short: SAP logistics modules cover the **procure-to-pay** and **order-to-cash** cycles, plus warehouse and transport management, ensuring end-to-end visibility across the supply chain.

Would you like me to highlight **career paths and certifications** specifically for SAP logistics (e.g., MM, SD, EWM, TM), so you can see which ones align best with your background in HSE, Oracle, and Monitoring & Evaluation?

make me a list of transactions used within SAP modules MM, what they do and when to each one of them

Here's a practical list of commonly used **SAP MM (Materials Management)** transaction codes, what they do, and when to use them.

1. Purchase Requisition (PR)

- **ME51N** – Create Purchase Requisition
Use when a department requests materials or services.
- **ME52N** – Change Purchase Requisition
Use to modify quantity, delivery date, account assignment, etc.
- **ME53N** – Display Purchase Requisition
Use to review PR details.
- **ME54N** – Release (Approve) Purchase Requisition
Use when PR requires approval under release strategy.

2. Request for Quotation (RFQ) & Quotation

- **ME41** – Create RFQ
Use to request pricing from vendors.
- **ME42** – Change RFQ
Modify RFQ before sending or closing.
- **ME43** – Display RFQ
View RFQ details.
- **ME47** – Maintain Quotation
Enter vendor quotation details.
- **ME49** – Price Comparison
Compare vendor quotations before selecting supplier.

3. Purchase Order (PO)

- **ME21N** – Create Purchase Order
Use to order materials/services from vendor (most common MM transaction).
- **ME22N** – Change Purchase Order
Modify price, quantity, delivery date, etc.
- **ME23N** – Display Purchase Order
Review PO details.
- **ME29N** – Release Purchase Order
Approve PO based on release strategy.

4. Goods Receipt (GR)

- **MIGO** – Goods Movement
Use for goods receipt against PO, goods issue, transfer posting, returns.
(Replaced older transactions like MB01, MB1A, MB1B)
- **MB03** – Display Material Document
View posted material documents.
- **MB51** – Material Document List
Report for material movement history.

5. Goods Issue (GI)

- **MIGO** – Goods Issue
Issue material to cost center, production order, or scrap.
- **MB1A** (legacy) – Goods Issue
Older transaction, still found in some systems.

6. Transfer Posting / Stock Transfer

- **MIGO** – Transfer Posting
Move stock between storage locations or plants.
- **MB1B** (legacy) – Transfer Posting
- **ME21N** (Stock Transport Order – STO)
Use when transferring stock between plants with purchasing process.

7. Invoice Verification

- **MIRO** – Enter Incoming Invoice
Post vendor invoice against PO and GR.

- **MIR7** – Park Invoice
Save invoice for later posting or approval.
- **MR8M** – Cancel Invoice Document
Reverse posted invoice.

8. Vendor Master Data

- **XK01** – Create Vendor (Central)
 - **XK02** – Change Vendor
 - **XK03** – Display Vendor
- (Older ECC system)
In SAP S/4HANA:
- **BP** – Business Partner
Used instead of XK01/XK02/XK03.

9. Material Master

- **MM01** – Create Material
- **MM02** – Change Material
- **MM03** – Display Material

Use to maintain material data like valuation, MRP, purchasing, storage.

10. Inventory & Stock Reports

- **MMBE** – Stock Overview
Check stock by plant/storage location.
- **MB52** – List Warehouse Stocks
Report of stock per material.
- **MC.9** – Inventory Analysis
Analyze stock levels and movements.

11. Source List & Info Record

- **ME11** – Create Purchasing Info Record
Maintain vendor-material price relationship.
- **ME12** – Change Info Record
- **ME13** – Display Info Record
- **ME01** – Maintain Source List
Define approved vendor for a material.

12. Outline Agreements

- **ME31K** – Create Contract
Long-term agreement with vendor.
- **ME32K** – Change Contract
- **ME33K** – Display Contract
- **ME31L** – Create Scheduling Agreement
For repetitive deliveries over time.

When to Use Each in the Procurement Cycle

Typical MM process flow:

1. **ME51N** → Create PR
2. **ME54N** → Approve PR
3. **ME41/ME47/ME49** → RFQ & quotation comparison (if needed)
4. **ME21N** → Create PO
5. **ME29N** → Approve PO
6. **MIGO** → Post Goods Receipt
7. **MIRO** → Post Invoice
8. **F110 (FI)** → Vendor payment

A flow diagram of MM process

A list of MM tables (like EKKO, EKPO, MSEG, MKPF)

Great — I'll give you both:

1. A clear **MM process flow diagram (step-by-step)**
2. A structured **list of key SAP MM tables** with what they store and when they are used

SAP MM End-to-End Process Flow Diagram

Below is the standard **Procure-to-Pay (P2P)** flow in SAP S/4HANA and ECC.

User Department

[1] Purchase Requisition (ME51N)

[2] PR Approval (ME54N)

Stock Transfer Process (Inter-Plant)

Consumption Process (No Inventory Increase)

Key SAP MM Tables (Most Important)

Below are the **most commonly used backend tables** in SAP MM.

1. Purchasing Tables

Table	Description	When Used
EKKO	PO Header	Stores PO header data (vendor, doc type, dates)
EKPO	PO Item	Line item details (material, qty, price)
EKET	PO Schedule Lines	Delivery dates & quantities
EKKN	PO Account Assignment	Cost center / GL assignment
EKBE	PO History	GR & Invoice history per PO
EBAN	Purchase Requisition	PR header & item data
EBKN	PR Account Assignment	Account assignment for PR

2. Material Master Tables

Table	Description	When Used
MARA	General Material Data	Basic material info (global)
MARC	Plant Data for Material	Plant-specific data
MARD	Storage Location Data	Stock by storage location
MBEW	Material Valuation	Valuation class, price
MVKE	Sales Data	Sales org data (SD view)

3. Inventory / Material Document Tables

Table	Description	When Used
MKPF	Material Document Header	GR/GI header data
MSEG	Material Document Item	Line items for movements
MSKU	Special Stock – Customer	Customer consignment stock
MSLB	Special Stock – Vendor	Vendor consignment stock

⚠ In S/4HANA:

- **MSEG & MKPF are replaced by MATDOC (table)**

4. Invoice Verification Tables

Table	Description	When Used
RBKP	Invoice Header	MIRO document header
RSEG	Invoice Item	MIRO line items

5. Vendor Master Tables

In ECC:

Table	Description
LFA1	Vendor General Data
LFB1	Vendor Company Code Data
LFM1	Vendor Purchasing Data

In S/4HANA:

- Vendor is integrated into **Business Partner (BP)** tables.

6. Source List & Info Record Tables

Table	Description
EINA	Purchasing Info Record – General
EINE	Purchasing Info Record – Purchasing Org Data
EORD	Source List

Table Flow in Procurement Cycle

Here's how tables connect in a typical P2P process:

PR Created

→ EBAN

PO Created

→ EKKO (Header)

→ EKPO (Item)

Goods Receipt

→ MKPF (Header)

→ MSEG (Item)

→ EKBE updated

Invoice Posted

→ RBKP (Header)

→ RSEG (Item)

→ EKBE updated

Most Important Tables for Interviews

If someone asks: “What are the key MM tables?”

Answer with:

- **EKKO / EKPO**
- **EBAN**
- **MSEG / MKPF (or MATDOC in S/4)**
- **RBKP / RSEG**
- **MARA / MARC**
- **EKBE**

That usually covers 80% of real-world questions.

A full table relationship diagram (with key fields like EBELN, BELNR, MATNR)

here is a **full SAP MM table relationship diagram** with the **key linking fields** (EBELN, BELNR, MATNR, etc.) used in ECC and SAP S/4HANA.

I'll show it in:

- 1 Visual flow diagram
- 2 Table relationship explanation
- 3 Key fields cheat sheet (very important for interviews)

FULL MM TABLE RELATIONSHIP DIAGRAM

Procure-to-Pay (P2P) Technical Flow

PURCHASE REQUISITION

EBAN

BANFN (PR No)

BNFPO (Item)

| (BANFN / BNFPO copied)

PURCHASE ORDER

PO HISTORY

GOODS RECEIPT (Material Doc)

MKPF (Header)

MSEG (Item)

-----	-----
MBLNR (Doc No)	→ MBLNR
MJAHR (Year)	MJAHR
BUDAT (Posting Date)	MATNR
	WERKS
	EBELN
	EBELP

↓ (Accounting impact)

ACCOUNTING DOCUMENT

BKPF

BELNR (FI Doc No)
GJAHR
BUKRS

↓

INVOICE VERIFICATION

RBKP (Header)

RSEG (Item)

-----	-----
BELNR (Invoice No)	→ BELNR
GJAHR	GJAHR
	EBELN
	EBELP

TABLE RELATIONSHIP EXPLANATION

1 PR → PO Link

From	To	Linking Fields
EBAN	EKPO	BANFN, BNFPO

When PO is created from PR:

- PR number (**BANFN**) flows into EKPO.

2 PO Header → PO Item

From	To	Linking Field
EKKO	EKPO	EBELN

- **EBELN** = Purchase Order Number
- EKKO = Header
- EKPO = Items

3 PO → Goods Receipt

From	To	Linking Fields
EKPO	MSEG	EBELN, EBELP

When GR is posted:

- Material document is created
- PO number stored in MSEG

4 Material Document Header → Item

From	To	Linking Fields
MKPF	MSEG	MBLNR, MJAHR

- **MBLNR** = Material Document Number

- **MJAHR** = Material Doc Year
- ⚠ In S/4HANA → replaced by **MATDOC**

5 PO History (Very Important Table)

Table What It Tracks

EKBE GR, IR, Returns, Delivery Costs

Links using:

- EBELN (PO)
- BELNR (Material/Invoice Doc)

This is the **most important audit table**.

6 Invoice Verification

From	To	Linking Fields
RBKP	RSEG	BELNR, GJAHR
RSEG	EKPO	EBELN, EBELP

- Invoice posted via MIRO
- Updates EKBE

7 Material Master Link

Table	Key Field
MARA	MATNR
MARC	MATNR + WERKS
MARD	MATNR + WERKS + LGORT
MSEG	MATNR

So:

MATNR connects:

MARA → MARC → MARD → EKPO → MSEG

MOST IMPORTANT KEY FIELDS (MEMORIZE THESE)

Field	Meaning	Found In
EBELN	PO Number	EKKO, EKPO, EKBE, MSEG, RSEG
EBELP	PO Item	EKPO, EKBE, MSEG, RSEG
BANFN	PR Number	EBAN
MATNR	Material Number	MARA, EKPO, MSEG
LIFNR	Vendor	EKKO
MBLNR	Material Document	MKPF, MSEG
MJAHR	Material Doc Year	MKPF, MSEG
BELNR	Accounting/Invoice Doc	RBKP, BKPF
GJAHR	Fiscal Year	BKPF, RBKP

Real Technical Join Example (ABAP Logic)

Example: Get PO → GR → Invoice

Join logic:

EKKO

JOIN EKPO ON EBELN

JOIN EKBE ON EBELN + EBELP

JOIN MSEG ON EBELN + EBELP

JOIN MKPF ON MBLNR + MJAHR

JOIN RSEG ON EBELN + EBELP

JOIN RBKP ON BELNR + GJAHR

Interview-Level Understanding

If asked:

“How are PO, GR, and Invoice technically connected?”

Answer:

- PO stored in EKKO/EKPO
- GR creates MKPF/MSEG
- Invoice creates RBKP/RSEG
- EKBE stores complete PO history
- All linked via EBELN & EBELP

That's a strong technical-functional answer.

19/02/2026

Here's the comparison of the transaction codes visible in your screenshot (SAP MM menu) and where they belong in the procurement cycle you listed.

(From the system of SAP SE)

Transactions Found in the Picture – Categorized

1 Purchase Requisition (PR)

From the picture:

- **ME53N** – Display Purchase Requisition
- **ME5A** – Purchase Requisitions: List Display

- **ME5J** – Purchase Requisitions for Project
- **ME5K** – Requisitions by Account Assignment

These all belong to **Purchase Requisition reporting/display**.

2 Purchase Order (PO)

From the picture:

- **ME23N** – Display Purchase Order
- **ME26** – Display PO Supplement (IR)
- **ME2A** – PO by Material Group
- **ME2B** – PO by Requirement Tracking Number
- **ME2C** – PO by Material Group
- **ME2K** – PO by Account Assignment
- **ME2L** – PO by Vendor
- **ME2M** – PO by Material
- **ME2N** – PO by PO Number

- **ME2W** – PO for Supplying Plant
- **ME80F / ME80FN** – General Purchasing Analyses
- **ME81N** – Analysis of Order Values
- **ME9F** – Message Output: Purchase Orders

All of these are **Purchase Order display, reporting, and analysis transactions.**

They belong to:

Step 4–5 of Procurement Cycle (PO creation & monitoring)

3 Goods Movement (GR / GI / Transfer)

From the picture:

- **MIGO** – Goods Movement

Belongs to:

Goods Receipt / Goods Issue / Transfer Posting

4 Invoice Verification

From the picture:

- **MIR4** – Display Invoice Document

Belongs to:

Invoice Verification (MIRO process)

5 Purchasing Analytics / Reporting

From the picture:

- **MC\$0** – Purchasing Group Analysis
- **MC\$2** – Purchasing Group Frequencies
- **MC\$4** – Vendor Purchasing Analysis
- **ZZKPI_ACHATS** – Custom KPI Report
- **ZANALYSE_FI_PO** – Financial Analysis of PR & PO
- **ZANALYSE_LI_PO** – Logistic Analysis of PR & PO
- **ZRECEPT_CO** – Custom Goods Receipt Analysis
- **ZENT_FACT_CO** – Custom Invoice Analysis
- **ZPAIE_FACT_CO** – Custom Payment Analysis

These are:

Reporting / Controlling / KPI transactions

Not operational steps, but monitoring & analysis tools.

6 Info Record / Price History

From the picture:

- **ME1P** – Purchase Order Price History

Belongs to:

Purchasing Information & price analysis

Summary – Where They Fit in the Procurement Cycle

Procurement Step	Transactions from Picture
PR (Step 1–2)	ME53N, ME5A, ME5J, ME5K
RFQ	✗ None shown
PO (Step 4–5)	ME23N, ME26, ME2*, ME80F/N, ME81N, ME9F
Goods Receipt	MIGO

Invoice MIR4

Payment (Only custom
ZPAIE_FACT_CO report
shown)

Reporting / KPI MC\$, Z reports

Important Observation

Your screenshot mainly contains:

- ✓ Display transactions
- ✓ Reporting & analysis transactions
- ✓ Very few creation transactions

Missing from the picture (core operational steps):

- ME51N (Create PR)
- ME21N (Create PO)
- MIRO (Post Invoice)
- ME41 (RFQ)

So the menu shown appears to be focused more on:
Monitoring, analysis, and document display
rather than document creation.

Perfect I'll give you a **clean training-style visual mapping** of the procurement cycle and place the transactions from your screenshot exactly where they belong.

(System: SAP SE – MM Module)

SAP MM – Procurement Cycle with Your Screenshot T-Codes Mapped

COMPLETE PROCUREMENT FLOW

1 PR → 2 PR Approval → 3 RFQ → 4
PO → 5 PO Approval
→ 6 Goods Receipt → 7 Invoice → 8
Payment

1 PURCHASE REQUISITION (PR)

Operational (Creation)

- ✗ Not shown in screenshot:
 - ME51N (Create PR)
 - ME52N (Change PR)
 - ME54N (Release PR)

From Your Screenshot (Display / Reporting)

- **ME53N** – Display PR
- **ME5A** – PR List Display
- **ME5J** – PR for Project
- **ME5K** – PR by Account Assignment

These are **monitoring & tracking** PR documents after creation.

2 RFQ (Request for Quotation)

✗ None shown in the screenshot.

Missing examples:

- ME41

- ME47
- ME49

3 PURCHASE ORDER (PO)

Operational (Creation)

- ✕ ME21N not shown

From Your Screenshot (Display & Analysis)

Display

- **ME23N** – Display PO
- **ME26** – Display PO Supplement (IR)

Reporting / Lists (ME2* Series)

- **ME2A** – PO by Material Group
- **ME2B** – PO by Requirement Tracking Number
- **ME2C** – PO by Material Group
- **ME2K** – PO by Account Assignment

- **ME2L** – PO by Vendor
- **ME2M** – PO by Material
- **ME2N** – PO by PO Number
- **ME2W** – PO by Supplying Plant

Purchasing Analysis

- **ME80F / ME80FN** – General Purchasing Analysis
- **ME81N** – Analysis of Order Values
- **ME1P** – PO Price History

Output

- **ME9F** – Message Output (Print/Email PO)

These belong to:

➡ **Step 4–5 (PO monitoring, follow-up, and analysis)**

4 GOODS MOVEMENT

From Screenshot:

- **MIGO** – Goods Receipt / Goods Issue / Transfer Posting

Step 6 of the cycle

Used for:

- GR against PO
- GI to cost center
- Transfer postings

5 INVOICE VERIFICATION

From Screenshot:

- **MIR4** – Display Invoice Document

✗ MIRO (Post Invoice) not shown

Step 7 (Invoice monitoring)

6 PAYMENT (FI Side)

From Screenshot:

- **ZPAIE_FACT_CO** – Custom Payment Analysis

Standard payment transaction (not shown):

- F110 (Automatic Payment Program – FI module)

7 PURCHASING CONTROLLING / KPI (Custom Reports)

These are not operational steps but monitoring tools:

- **MC\$0** – Purchasing Group Analysis
- **MC\$2** – Purchasing Group Frequencies
- **MC\$4** – Vendor Purchasing Analysis
- **ZZKPI_ACHATS** – KPI Dashboard
- **ZANALYSE_FI_PO** – Financial Analysis of PR & PO
- **ZANALYSE_LI_PO** – Logistic Analysis of PR & PO
- **ZRECEPT_CO** – Goods Receipt Analysis
- **ZENT_FACT_CO** – Invoice Analysis

These support:

- ✓ Procurement controlling
- ✓ Performance monitoring
- ✓ Audit & compliance

Big Picture Analysis of Your Menu

Your menu is mainly:

- ✓ Display transactions
- ✓ Reporting transactions
- ✓ Analysis & KPI tools
- ✓ Follow-up monitoring

It is NOT focused on:

- ✗ Document creation
- ✗ Operational purchasing execution

This suggests:

The role using this menu is likely:

- Purchasing controller
- Procurement analyst
- Buyer follow-up role
- Audit/reporting user

Not a full operational buyer role.

Final Visual Mapping

Process Step	Screenshot Transactions
PR	ME53N, ME5A, ME5J, ME5K
RFQ	None
PO	ME23N, ME26, ME2*, ME80F/N, ME81N, ME1P, ME9F
Goods Receipt	MIGO
Invoice	MIR4
Payment	ZPAIE_FACT_CO
KPI / Controlling	MC\$, Z reports

If you'd like next, I can:

- Create a **role-based explanation** (Buyer vs Controller vs Storekeeper)

- Create a simplified training slide version
- Or explain how this menu reflects internal controls & audit structure

Excellent — let's break this down clearly by **role** and map the transactions from your screenshot to real business responsibilities inside SAP SE MM.

This will help you understand **who should use what** and why.

1 BUYER (Purchasing Officer)

Main Responsibility

- Convert PR → PO
 - Negotiate with vendors
 - Monitor PO status
 - Ensure delivery & pricing accuracy
-

✓ Transactions from Your Screenshot Used by Buyer

PR Review

- **ME53N** – Display PR
- **ME5A / ME5J / ME5K** – PR Lists

Used to review requisitions before creating PO.

PO Monitoring

- **ME23N** – Display PO
- **ME26** – Display PO Supplement
- **ME2A / ME2B / ME2C / ME2K / ME2L / ME2M / ME2N / ME2W** – PO Reports

Used to:

- Track open POs
- Check overdue deliveries
- Monitor vendor performance

Price & Vendor Follow-Up

- **ME1P** – Price History

- **ME80F / ME80FN** – Purchasing Analysis
- **ME81N** – Order Value Analysis

Used during:

- Negotiation
- Contract review
- Spend analysis

PO Output

- **ME9F** – Send / Print PO

✗ Missing for Buyer (Not in Screenshot)

- ME21N (Create PO)
- ME22N (Change PO)
- ME29N (Release PO)

This means the buyer role in your system may be restricted to monitoring.

2 STOREKEEPER / INVENTORY CLERK

Main Responsibility

- Receive goods
- Post goods receipt
- Manage stock movements
- Ensure physical vs system stock matches

✓ From Your Screenshot

Goods Movement

- **MIGO** – Goods Receipt / Goods Issue / Transfer

Core transaction for storekeeper.

Goods Receipt Analysis

- **ZRECEPT_CO** – Custom GR Analysis

Used to:

- Monitor received quantities
- Track pending GR
- Audit receipt accuracy

✗ Missing for Storekeeper

- MMBE (Stock Overview)
- MB52 (Warehouse stock report)

Your menu seems limited mainly to goods movement posting.

3 CONTROLLER / PROCUREMENT ANALYST

Main Responsibility

- Monitor spending
- Analyze procurement KPIs

- Check compliance
- Track financial impact

This role is strongly represented in your screenshot.

✓ Controlling & KPI Transactions

Purchasing Analytics

- **MC\$0** – Purchasing Group Analysis
 - **MC\$2** – Purchasing Frequencies
 - **MC\$4** – Vendor Purchasing Analysis
-

Advanced Analysis

- **ME80F / ME80FN** – General Purchasing Analysis
 - **ME81N** – Order Value Analysis
-

Custom Z Reports (Very Controller-Oriented)

- **ZZKPI_ACHATS** – KPI Dashboard

- **ZANALYSE_FI_PO** – Financial PR/PO Analysis
- **ZANALYSE_LI_PO** – Logistic PR/PO Analysis
- **ZENT_FACT_CO** – Invoice Analysis
- **ZPAIE_FACT_CO** – Payment Analysis

These are clearly:

- ✓ Spend monitoring
- ✓ Budget tracking
- ✓ Invoice reconciliation
- ✓ Performance KPIs

Invoice Monitoring

- **MIR4** – Display Invoice

Controllers use this to:

- Verify invoice posting
- Cross-check PO vs GR vs Invoice (3-way match)

Role Comparison Summary

Transaction Type	Buyer	Storekeeper	Controller
PR Display	✓	✗	✓
PO Display	✓	✗	✓
PO Reporting	✓	✗	✓
Price History	✓	✗	✓
Goods Movement (MIGO)	⚠ (view)	✓	✗
Invoice Display (MIR4)	⚠	✗	✓
KPI / Z Reports	⚠	✗	✓

What Your Screenshot Role Looks Like

Based on the menu:

- ✓ Heavy reporting
- ✓ Heavy analysis
- ✓ PO monitoring
- ✓ Invoice review
- ✓ Custom KPI reports

This profile strongly resembles:

Procurement Controller / Purchasing Analyst

Not a pure operational buyer
Not a pure warehouse storekeeper

Governance Insight

The menu design suggests:

- Separation of duties
- Limited creation rights
- Strong monitoring capability

This is good for:

- ✓ Internal control
 - ✓ Audit compliance
 - ✓ Financial transparency
-

If you want next, I can:

- Explain how this supports segregation of duties (audit perspective)

- Design a clean MM role matrix (for implementation project)
- Or create interview-style SAP MM role explanations

Yes — I know **PUB400**. It's a **public IBM i (AS/400) system** that anyone can access for free to practice and learn.

What PUB400 Is

- **Community IBM i server** hosted in Germany.
- Provides free accounts so you can log in via a 5250 terminal emulator.
- Great for practicing **RPG, COBOL, CL commands, SQL/DB2**, and exploring the IBM i environment.
- Widely used by students, hobbyists, and professionals who want hands- on IBM i experience without owning the hardware.

How It Works

1. **Register for an account** → You request a free user profile on the PUB400 website.
2. **Connect via terminal emulator** → Use IBM i Access Client Solutions, Mocha TN5250, or another emulator.
3. **Log in with your credentials** → You'll get a green- screen interface (5250).

4. **Practice freely** → Run CL commands, write RPG programs, query DB2 tables, and explore the IBM i system.

✓ **Why It's Useful**

- No cost, no setup — just request an account and connect.
- Safe sandbox for learning IBM i without affecting production systems.
- Community support — many learners and professionals use it, so you'll find tutorials and examples online.

In short: **PUB400 is the easiest way to get hands-on practice with AS/400 (IBM i) today.**

Would you like me to show you a **step-by-step guide to registering and connecting to PUB400**, so you can start experimenting right away?

walk me through how to download it and install it

Great — let's walk through how to get started with **PUB400**. You don't actually "download" PUB400 itself, since it's a **remote IBM i server** you connect to. What you need is a **terminal emulator** on your computer that lets you log in to PUB400.

Step 1: Request an Account

1. Go to the PUB400 website: pub400.com.

2. Fill out the registration form to request a free user profile.
3. You'll receive a **username and password** for the system.

Step 2: Install a 5250 Terminal Emulator

To connect, you need a program that speaks the IBM i “green- screen” protocol (TN5250). Popular free options:

- **IBM i Access Client Solutions (ACS)** → official IBM tool, works on Windows, macOS, Linux.
- **Mocha TN5250** → lightweight emulator for Windows and mobile.
- **PuTTY with TN5250 plugin** → if you prefer something minimal.

Recommended: **IBM i ACS**, since it's the most complete and supported.

Step 3: Configure the Connection

1. Open your terminal emulator.
2. Create a new connection with these settings:
 - **System/Host name:** *pub400.com*
 - **Port:** *23* (default for TN5250)
 - **Connection type:** Telnet (5250).
3. Save the connection.

Step 4: Log In

1. Connect to PUB400 using your emulator.

2. Enter the **username and password** you received.
3. You'll see the IBM i main menu — from here you can run CL commands, SQL queries, or start programming in RPG/COBOL.

✓ Quick Test

Once logged in, try typing:

Code
WRKLIB

This command shows the libraries you have access to.
It's a good way to confirm your account is working.

So in short:

- You don't download PUB400 itself.
- You **register for an account** on pub400.com..
- You **install a terminal emulator** (IBM i ACS is best).
- You **connect to pub400.com** with your credentials.
